6th volume in the Techno-thriller series by Breakfield and Burkey delves into the merger of science and technology

What are the DNA changes science can invoke using technology

Dallas, Texas August 11, 2015 – *The Enigma Always* explores the latest cyber battle between good and evil with next generation use of supercomputers to re-engineer humans at the cellular level. Changing at the cellular level requires a combination of nano-technology and DNA mapping on live tissues. Unfortunately the price of admission for this process is steep from an ethical perspective, and the R-group is tasked to discover the culprits and intercept them.

The Enigma Always features many returning characters, both good and evil, and introduces the self-centered Dr. Xavier Pekoni and his fountain of youth project. Pekoni has harnessed the power of a supercomputer to help re-engineer the human body to overcome biologically flawed tissue such as cancer. The question becomes which is more deadly, the cancers being battled or the expedient methods used by Pekoni to meet his all-consuming goal.

Dr. Pekoni boldly states to a peer review of other doctors: “If I can demonstrate that cancerous tissue can be replaced with properly functioning tissue, then the obvious next step is to reprogram the entire living being to continue in the proper operational mode to potentially achieve a life span of hundreds or even thousands of years! Think of it!”

“Science and technology have been exploring the possible inroads to be made since the basic completion of the international Human Genome Project,” said author Burkey. “Plus, you have, for several years now, scientists working on the many possible advances in medicine and biotechnology which can be gained in understanding predisposition for a variety of physical and mental illnesses,” said author Breakfield. Author Burkey added, “There are a myriad of public and privatized approaches to using the information obtained and taking on the analysis of the variants.” *The Enigma Always* (Create Space Independent Publishing Platform, 2015, ISBN-13: 978-1516861422, 13.95, <http://enigmabookseries.com/book-six-the-enigma-always/>)

Breakfield and Burkey have spent the majority of their professional careers in the technology field. They have written two previous technology non-fiction books and numerous white papers with a technology freshness factor of months. They are now hooked on fiction with their Enigma Book Series, where they bring a fresh look at technology woven into a story that adds depth to how we are embracing technology in this world. *The Enigma Always* will have you wondering how fast the fatal diseases that plague our world might be cured. Find the sample chapters, a place to ask questions, places to purchase, reviews, a book trailer, and other interesting details regarding the series and where it can take you at <http://enigmabookseries.com/book-six-the-enigma-always/> . “We picked out one small possibility which we believe could result from the scientific undertaking, but we recognize it is an extremely sensitive topic among scientists and even government leaders, which our readers may also have an opinion on,” said author Breakfield.

About Breakfield and Burkey:

Breakfield is a long-time technology geek who enjoys writing, studying World War II history, travel, and cultural exchanges. He's also a fan of wine-tastings, wine-making, riding his Harley, cooking extravaganzas, and continues developing his woodworking skills.

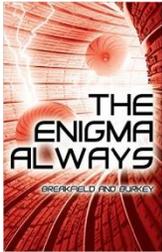

Burkey is a customer-experience technology-focused professional who has a writing passion. She has written white papers and technology documents but prefers the freedom of fictional writing. She is a fan of learning, travel, family, outdoor activities, good food, wine sampling, reading, and friends.

They love telling a good story framed with the possibilities of today's technology and humor. They believe that '**Tech-nol-o-gy (tek'näləjē) –**

About this Book:

At the very time the R-Group team members, Jacob and Petra, are being emotionally and psychologically ripped apart, they're pitted against a rich, evil genius using next-generation DNA mapping and supercomputers to reengineer humans. This story presents the thrilling exploration of the intersection of cyber technology, medical science, and human greed.

The R-Group is fighting at the forefront of the cyber wars, battling against an evil force seeking to harness supercomputer technology to reengineer humans at the cellular level. In parallel, returning cyber-thugs are interjecting their brand of technology domination, which must be thwarted.

The morally-devoid Dr. Xavier Pekoni displays ethically-challenged intentions regarding his fountain of youth project. Using nano-technology and DNA mapping, Pekoni is close to reaching his goal of extending human life ten-fold and will stop at nothing to achieve his objectives.

The R-Group and the recently emerged CATS team must use the full range of their intelligence and technological savvy to right the wrongs created by Pekoni.
