3rd volume in the Techno-thriller series by Breakfield and Burkey adds wonderfully unpredictable characters with unclear motivations!

The three legged stool of suspense, humor, and technology

Dallas, Texas May 29, 2014 – *The Enigma Ignite* continues the authors' hi-tech theme as it focuses on the inroads that are possible when nano-technology, dynamic programming algorithms and drones are mixed together for next generation military communications. A relatively quiet professor at Texas A&M is researching ways to significantly improve animal husbandry in order to boost global food supplies. Her use of nano-technology is discovered by an inquisitive engineer who sees her applied use of this technology quite differently. Keith Austin Avery is a high level defense contractor, engaged by the Brits and Americans, to combine the miniaturization capabilities of nano-technology along with the use of drones for the ideal battlefield communications solution. His postulations bring him to the attention of terrorists, along with his subcontractor Eilla-Zan Marshall, with traumatizing effects.

The professor, her assistant Daisy, and Franklin the pig end up in a protective ranch in Georgia that is home to the R-Group's telecommunications subcontractor Andrew. There, the final assembly of the Battlefield Communication solution is worked through in collaboration with Jacob and Petra. Quip assists and finds an unlikely relationship that begins with a sugary southern drawl.

As a sequel to *The Enigma Rising*, *The Enigma Ignite* continues the tale of high stakes information brokering, taking readers to wonderful places all over the world appropriate to the storyline. Again, they bring back favorite characters and introduce some new ones, who may or may not last.

"Nano-technology is an area receiving increased focus by many companies. Its full range of application has been barely scratched at this point. It has untold benefits to deliver to mankind," said author Breakfield. "We wanted to add a bit of humor into this story," added author Burkey, "as it is a personal growth area for me." Author Breakfield said, "I have known some outlandish people over my life so far and I wanted to add in some particularly defining stories that mirrored the challenges some must overcome. Such is the case with a portion of the background of Eilla-Zan." "I simply love her fiery hair," added author Burkey. *The Enigma Ignite* (Create Space Independent Publishing Platform, 2014, ISBN-13: 978-1499198102, 13.95, <http://enigmabookseries.com/book-three-the-enigma-ignite/>)

Breakfield and Burkey have spent the majority of their professional careers in the technology field. They have written two previous technology non-fictions books and numerous white papers with a technology freshness factor of months. They have become hooked on fiction with their Enigma Book Series. They bring a fresh look at technology woven into a story of relevant current events and a broad base of characters, and explore the possible uses of new technology and new relationships.

The Enigma Ignite uses this as the foundation of a story that is packed with suspense, humor, and romance to make readers ask what's next. *The Enigma Ignite* will have you cheering for the relationships and wondering how Franklin the pig got so smart. Find the sample chapters, a place to ask questions, places to purchase, reviews, a book trailer, and other interesting details regarding the series and where it can take you at <http://enigmabookseries.com/book-three-the-enigma-ignite/> "We look forward to comments from our readers," admitted author Burkey

###

About Breakfield and Burkey:

Breakfield is a long-time technology geek who enjoys writing, studying World War II history, travel, and cultural exchanges. He's also a fan of wine-tastings, wine-making, riding his Harley, cooking extravaganzas, and continues developing his woodworking skills.

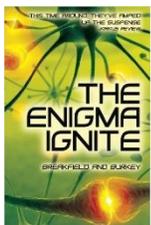

Burkey is a customer-experience technology-focused professional who has a writing passion. She has written white papers and technology documents but prefers the freedom of fictional writing. She is a fan of learning, travel, family, outdoor activities, good food, wine sampling, reading, and friends.

They love telling a good story framed with the possibilities of today's technology and humor. They believe that '**Tech·nol·o·gy (tek' näləjē) –**

About this Book:

This third installment of the Enigma Series focuses on the latest high-tech innovations in military communications—and just how far certain world powers will go to utilize them.

As the world's biggest powers compete for superiority, it's not larger weapons or greater numbers of soldiers that top their wish lists. Instead, it's the latest and greatest technological advances: nano-technology, dynamic programming algorithms and drones, working together to build the next generation of military communications.

When a professor at a Texas university begins researching ways to improve animal husbandry and boost global food supplies, her results catch the eye of inquisitive engineer Keith Austin Avery—whose interests have nothing to do with solving world hunger.

But as Avery works on potential new uses for this technology, his research draws the attention of a powerful terrorist group, with traumatic results for him and his subcontractor Eilla-Zan Marshall. Now it's up to the members of the R-Group to find the terrorists and their captives, using all the data and analytics at their disposal to leverage each and every piece of information.

Review Copies and Media Interviews:

For a review copy of *The Enigma Rising* or an interview with Breakfield and Burkey, please contact Breakfield or Burkey at (214) 707-8035 or seriesenigma@gmail.com. When requesting a review copy, please provide your name and street address.
